

PRESS RELEASE

**SACYR WATER BEGINS TO MANAGE THE WATER SUPPLY IN
RIBADESELLA (ASTURIAS)**

Madrid, December 16th, 2019. Sacyr Water has begun managing the supply of drinking water and sewerage services in Ribadesella (Asturias) for a five-year period (with the possibility of an extension for another 5 years), a project worth 5 million euros.

Sacyr Water is providing a service to a population of just under 5,700 which increases, during vacation periods, to 30,000. The company will supply over 1 million cubic meters of water per year to its customers.

Along with innovation, major priorities for all the processes involved in the service are the preservation of natural resources and the environment, and occupational health and safety.

As part of its commitment to innovation, Sacyr has designed an app that includes **Aqu@m** comprehensive management software. This allows access to the **virtual office** from any location, and can be used to obtain the bill for the service more quickly and easily, and in a more environmentally sustainable way. Among other things, it can also be used to submit meter readings, to report problems and to simulate a customer's next bill.

More about the virtual office: https://www.youtube.com/watch?v=sS_I1ZOcFTg

This contract represents the consolidation of **Sacyr Water's** activity **in Asturias**, where it manages the public supply service in the Asturias Central Area, the water network linked to the Canal del Narcea in Ablaneda and the management, maintenance and upkeep of the La Franca Waste Water Management Stations. In addition, it manages the Waste Water Management Stations for the municipalities of Oscos, Taramundi, Grandas
