PRESS RELEASE

SACYR PROYECTA SELECTED AS OWNER ENGINEERING FOR A NEW TERMINAL FOR LIQUIFIED GASES IN STADE, GERMANY

- **It will oversee engineering, purchasing, procuring, construction and commissioning tasks for the terminal.**

Madrid, April 26, 2023.- Sacyr Proyecta, a Sacyr Engineering and Infrastructure company, will be the owner engineering company for the new terminal for liquified gases currently being developed by HEH (Hanseatic Energy Hub) in Stade, Germany.

In partnership with HEH, Sacyr Proyecta will oversee the engineering, purchasing, and procuring, construction and commissioning tasks for the EPC contractor, throughout the project's execution through 2027.

The terminal will have a regasification capacity of 13.3 bcm/a and two LNG storage tanks with a capacity of 240,000 cubic meters each. Moreover, the port is designed to be accessible for the largest LNG tankers (Q max) with a length of 345 meters and 265,000 cubic meters of capacity and will have all the infrastructure and auxiliary equipment necessary to ensure the highest safety standards.

Hanseatic Energy Hub is a consortium created to secure Germany's supply of LNG and green gases, while preparing for the market ramp-up of hydrogen.

HEH is based on a future-flexible modular system for the green energy transition that maximizes the diverse opportunities offered by the Stade energy region. In the first expansion phase 2027, an emission-free terminal for LNG, bio-LNG and SNG (synthetic natural gas, artificially produced LNG) will begin operating in the existing industrial park.

This land-based terminal will commence operation as an ammonia-ready facility.

PRESS RELEASE

By the end of 2023, Stade is also set to become the location for one of five Floating Storage and Regasification Units (FSRUs) chartered by the German federal government.

About Sacyr Projecta

Sacyr Projecta, a Sacyr Engineering and Infrastructure company, has over 300 professionals specializing in energy projects, with a focus on the oil and gas, energy, chemicals and petrochemicals, industrial facilities, LNG, and renewable hydrogen projects.

Successful projects developed by Sacyr Projecta include the expansion of the Oporto refinery and a LNG terminal in Malaysia, a gas compression facility, or the construction of an unloading and storage facility, both in Peru.

Currently, Sacyr Projecta develops projects such as the expansion of the Fluxys Zeebrugge LNG facility in Belgium; a gas compression facility in Egypt for GASCO; an ultra-high density polyethylene facility for Repsol in Puertollano, Spain; an advanced biofuel facility for Repsol in Cartagena, Spain; or the commissioning of a LNG facility in El Musel (Gijón, Spain) for Enagás, and is also a frequent collaborator in projects by DuPont Ibérica, Alcoa and Química del Nalón, among others.
